

$$X = \{y_0\}$$

$$t=0$$

TEOREMA SOTTOPIE

TEOREMA  
CAMMINI

$Y_X I$   
 $y_0 X I$

DIM

Unicità del sollevamento omotopie

(4.3)

$F'$  e  $F''$  sono sollevamenti di  $F$   
 $y$

$\forall y \in Y$

$$F'|_{(y,0)} = F''|_{(y,0)}$$

$\implies$  unicità di sollev.

$$F|_{Y \times I} = F''|_{Y \times I}$$

$$Y \times I$$

$$F = F''$$

TH UNICITA'

mi dice CHE E' BEN DEFINITA

- Dimostrare che  $\forall y \in Y \exists N_y$  intorno aperto t.c.  $F|_{N_y}$  si solleva
- Costruisco  $F'$  sollevamento incollando i sollevamenti di  $F|_{N_y} \forall y \in Y$

DIMO TH 4.2

Osservazione

Supponiamo

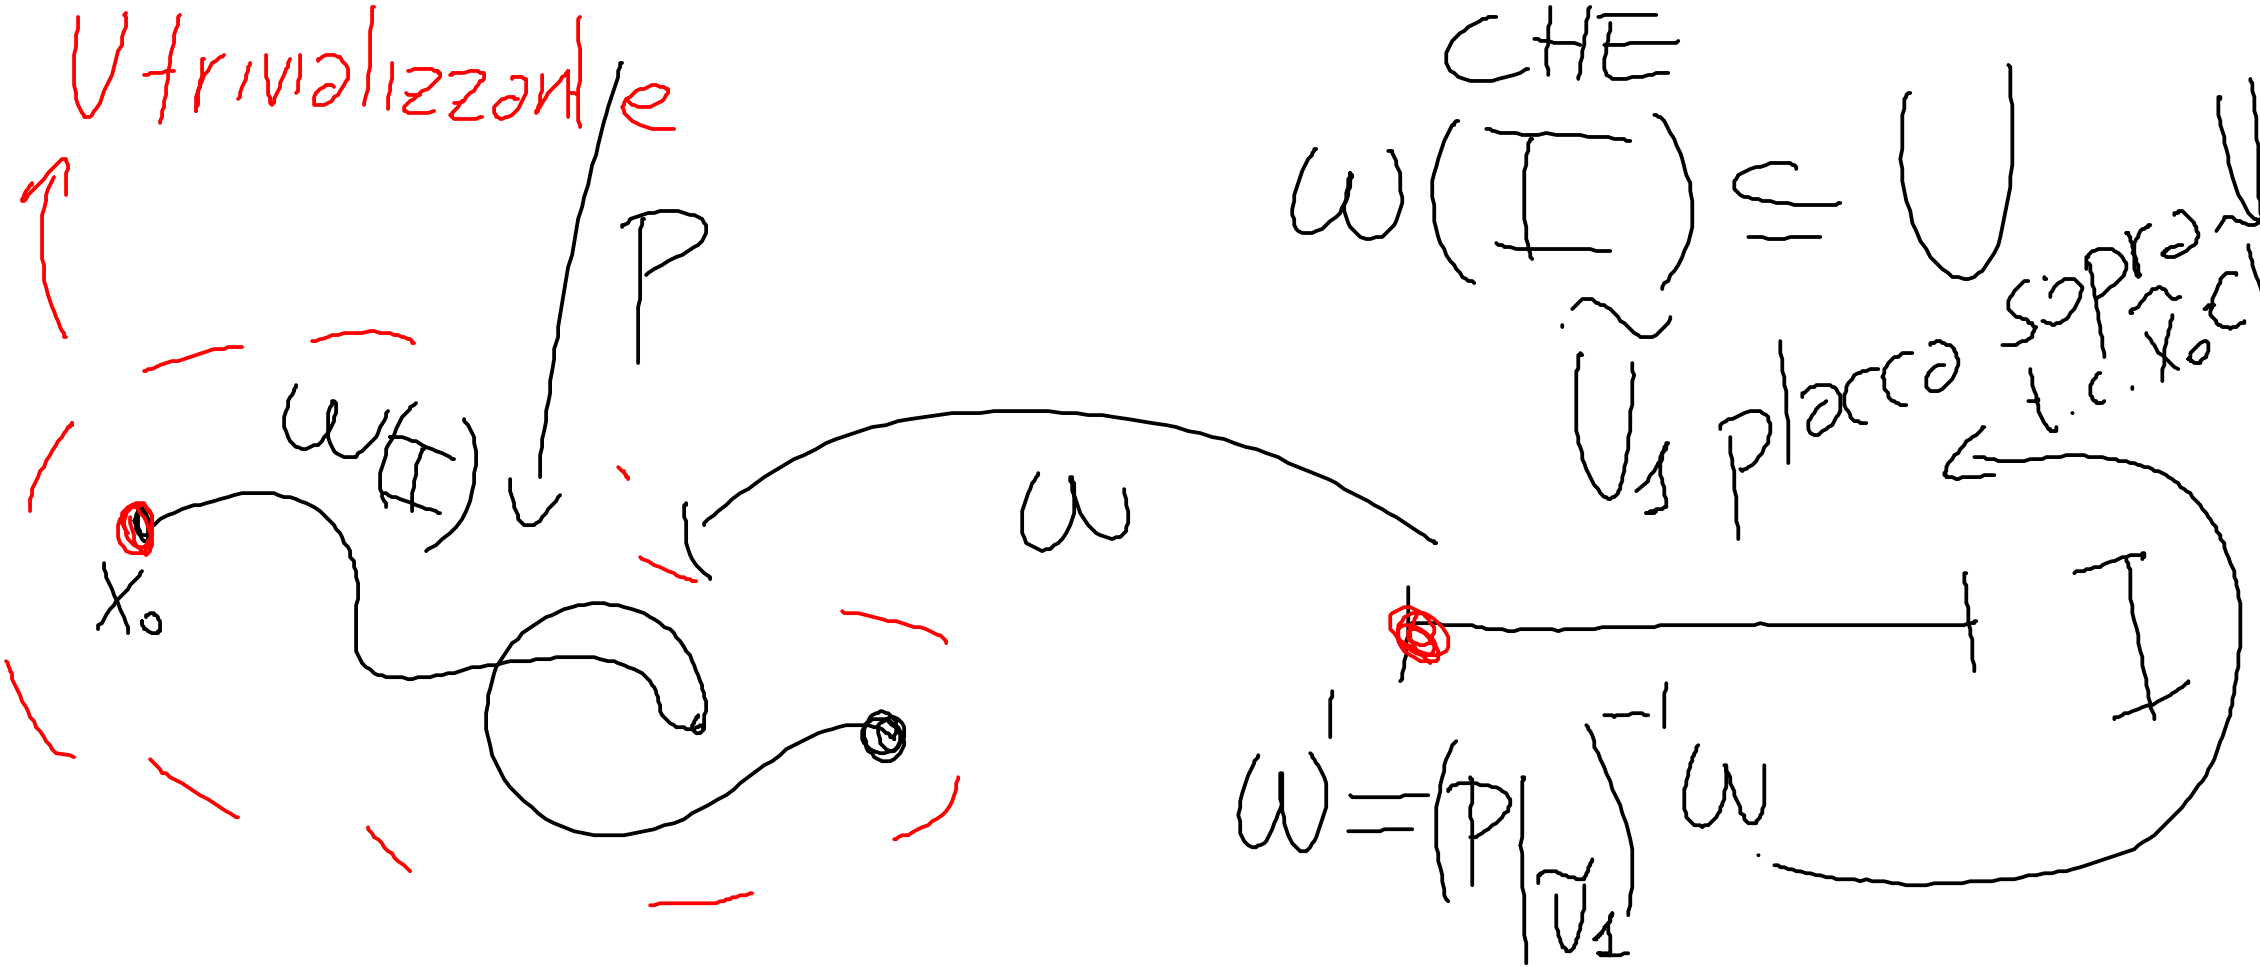

*U* triviale

CHE

$$\omega(I) \subseteq U$$

$\sim U_1$  placca sopra  
t.c.  $x_0 \in U$

X

$$\omega' = (P|_{U_1})^{-1} \omega$$

# CASO GENERALE

RICOPRIMENTO  
APERTO DI  $I$

$$\{ \omega^{-1}(U_\alpha) \}$$

$$\omega(I) \subseteq \bigcup_x U_x \text{ trivializzanti}$$

$\exists$  sottoricoprimento  
finito  $U_1, \dots, U_k$

costruisco come  
prima

$w$

$[t_i, t_{i+1}]$

incollando  
opportuno

sui valori  $w(t_i)$

$$0 = t_0 < t_1 < \dots < t_h = 1$$

$$[t_i, t_{i+1}] \subseteq \cup_j$$

$$t_i \in \cup_j \cap \cup_j \\ t_i \notin \partial \Omega_j$$
